

Vector LiveSafe Panic Alarm

Our Panic Alarm functionality acts as a silent panic button to connect faculty, staff, and students in the Greenville area to the security team quickly and discreetly in an emergency situation.

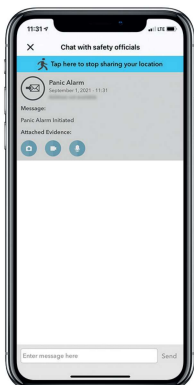

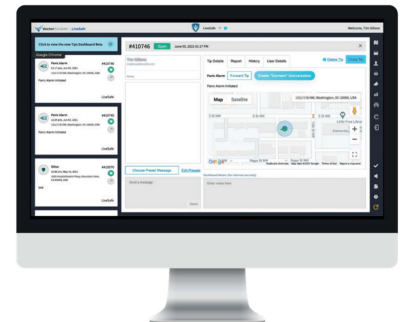

Easy and discreet activation

Using the LiveSafe mobile app, Panic Alarm is activated with just two taps and the campus security team is immediately notified. The mobile Panic Alarm functionality eliminates the need to be near a physical panic button and allows faculty, staff, and students to request help wherever they are in Greenville.

Improved emergency response

Once Panic Alarm is activated, an instant notification is sent to ECU Police with the location of the faculty, staff, or student who requested help. The submitter's location is then updated in real-time as they move, enabling law enforcement to know exactly where to respond.

Direct connection to security

In addition to location sharing, Panic Alarm also initiates a direct message thread between the faculty, staff, or student and the campus security team. This provides the opportunity to gather more information and better assist the person in need.
